

PRODUCT INFORMATION SHEET 3" & 4" DECK RISER PLATES

Description:

Pli-Dek Deck Riser Plates are specifically designed for use with the Pli-Dek Waterproofing Systems to facilitate the installation of synthetic wood deck finishes. The Pli-Dek Deck Riser Plates are constructed of T304 grade Stainless Steel pre-drilled with .22" holes every .5" o.c. The Deck Riser Plates are provided in 3" or 4" heights.

Uses:

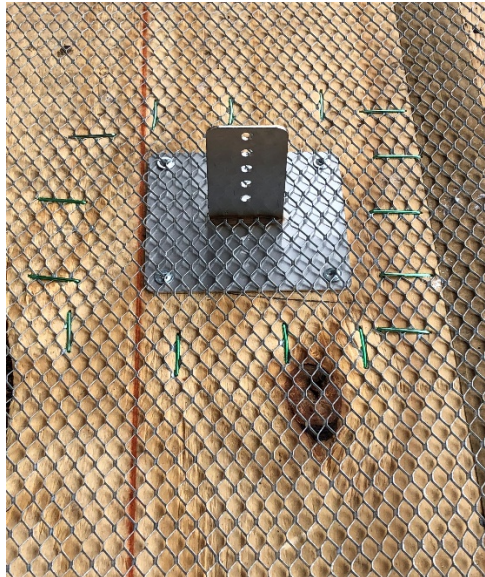

Pli-Dek Stainless Steel Deck Riser Plates are specifically designed horizontal attachment of sleeper trusses for wood finishes such as Redwood, Trex Composite decking or equivalents. The plates are used to horizontally attach the synthetic wood finishes instead of a vertical fastener from above the sleeper installation that would result in penetration to the Pli-Dek Waterproof Deck Coating System.

Advantages:

- Ease of installation
- Cost effective
- No penetrations in the waterproofing system
- Wood finishes stay off the surface away from moisture.
- Provides a level deck surface while maintaining slope for drainage at the waterproofing layer.
- Can be used for elevated pads for wet bars, bbq grills and outdoor fire pits to prevent penetrations into the waterproofing system.

Instructions:

Layout by others. Install the Pli-Dek Deck Riser Plate to the plywood substrate where additional blocking has been installed per Pli-Dek details, using a 1 1/2" #10 Sharp Point Lath Screw or a 1 1/2" #10 Modified Truss Screw for wood decks (low-profile head). For concrete use a 1 1/4" x 1/4" concrete masonry screw with a Phillips head to create a solvent to remove any fabrication oils. When installing lath over the deck riser plate ensure there are no lath overlaps within 6" of the deck riser plate and fasten the lath securely around the perimeter .

Availability:

Deck Riser Plates

3" or 4" Riser Tab - 4" x 4" fastening plate.

Packaging:

Pli-Dek Deck Riser Plates are sold individually.
