

HIGH FIRE ZONES: TESTED & APPROVED

While all of California is subject to some degree of fire hazard, there are environmental factors that make some areas of California more hazardous than others. The State Fire Marshal's Building Materials Listing (BML) Program determines through testing whether a product is deemed appropriate for the exterior design and construction of new buildings located within a Wildland-Urban Interface Fire Area by establishing a minimum standard for protection through code compliancy and testing.

THE PLI-DEK "F" SYSTEM HAS PASSED THE ASTM E84 WITH A CLASS "A" AND ASTM E2768 TESTS.

Pli-Dek Waterproof Deck Coating System is qualified to be installed in Fire Hazard Severity Zone within State Responsibility Areas or any Wildland-Urban Interface Fire Area.

- E84 10-minute Class A, extended 30-minute Pass (requirement for CA State Fire Marshal)
- Decking for Wildland Urban Interface {W.U.I.} Listing No: 8110-2327:0500
- ICC ESR-2097
- Class A and One-Hour Fire Rating
