

## PLI-DEK SYSTEM

### WATERPROOF DECK COATING – PLYWOOD SUBSTRATE

### INCLEMENT WEATHER

#### MATERIALS

1. 2.5lbs sq yard G90 Hot Dipped Galvanized Metal Lath
2. Corrosion-resistant staples
3. Pli-Dek Seam Paper
4. GU80-1 Base Coat Powder (gray)
5. GU80-1 Top Coat Powder
6. GU80-1 Custom Top Coat
7. GU80-1 Liquid Admixture
8. GS88-1 Pigmented Sealer
9. ¾ oz. Fiberglass Mat
10. PD Resin
11. PD Flash Coat and Flash Coat Seam Tape or self-adhering drywall mesh tape (optional)
12. GS13 (Clear or Pigmented) or PD Clear Sealer
13. 40 grit non-skid sand (optional)

#### TOOLS

1. Variable Speed Drill (capable of producing 1000 RPM's)
2. Wind-lock B-M1 mixing blade or equivalent
3. Extension Cord
4. Clean 5 Gallon Plastic Containers
5. Measuring Bucket (1 gal, 2 gal, etc.)
6. Hand Grinding Stone
7. Level
8. Pencil
9. Utility Knife
10. Scissors
11. Masking Tape
12. 4" x 22" Pool Trowel
13. Stainless Steel Trowel
14. Margin Trowel
15. Small Paint Brushes
16. Paint Roller (3/4" nap)
17. Extension Handle
18. Hopper Gun
19. Compressor (1-1/2 horsepower, electric or better)
20. Air Hose
21. Semi-stiff Broom
22. Dust Mask
23. Goggles
24. Rubber or Cloth Gloves
25. Metal Spiked Golf Shoes
26. Tin Snips
27. Hammer
28. Pneumatic Staple Gun
29. Hudson or Chapin Sprayer
30. Paperless drywall joint tape

#### I. Substrate Inspection/ Preparation

##### A. General

1. Pli-Dek materials must be applied over sound dry exterior grade plywood decks.  
\*\*Contact Pli-Dek Systems, Inc. for installation approvals over OSB substrates.

2. All plywood substrates are recommended to be sloped ¼" per foot.
3. Maximum deflection of the deck shall be less than L/360th of the span.
4. All inspections, as required by local building authorities, shall be the responsibility of the contractor, owner, and/or their agent.

##### B. Plywood

1. Plywood shall be a minimum of 16mm, 5/8" (3/4" recommended) sound and dry, exposure 1 sheathing, and have a maximum span between supports of 410mm (16") on center. All plywood shall be securely fastened to the supports with screws or ring shank nails spaced in accordance with APA guidelines and Building Code requirements.
2. Framing or blocking must support all plywood edges, except as per APA guidelines; blocking is not required when tongue and groove plywood is used.
3. The plywood surface shall be clean, dry, and free of dirt, dust, oil, paint, or any other contaminants that may impair adhesion.
4. All plywood seams shall be staggered, and gapped 3.2mm (1/8"). All seams shall be covered with a maximum of 50mm (2") wide flashing paper tacked in place. NOTE: If plywood is butted tightly, the seams shall be saw cut to provide a 3.2mm (1/8") gap between sheets, except tongue & groove. Ensure that the tongue and groove section of the plywood is installed so as to allow for expansion.
5. All adjacent edges of the plywood sheets shall not be more than 0.78mm (1/32") out of plane (i.e. above or below each other).
6. Plywood should be installed with a 6.4mm/.3m (1/4") per linear foot slope. Decks with parapet enclosures must be sloped to a drain or scupper.
7. Any variation from the framing specifications mentioned in Section I, requires written approval and system recommendations from Pli-Dek Systems, Inc.

##### C. Flashing

The following items that involve flashing must be completed or adhered to:

1. Flashing shall be minimum 26 gauge galvanized, 302 Stainless Steel, or Copper. (contact Pli-Dek for Alternatives).
2. Insure ALL metal flashing is wiped clean with a solvent to insure oils are completely removed from the Surface. Dissimilar metals; such as Copper and galvanized, should NEVER come in direct contact with each other.
3. Openings shall be flashed before installation of doors and sliders. NOTE: If doors or sliders have been installed without proper flashing, we

- recommend they be removed and proper flashing installed.
4. All penetrations, including posts, or other objects that protrude through the deck shall be installed and flashed prior to applying the Pli-Dek materials.
  5. All decks with a parapet surround require a scupper not less than 76mm (3") wide, and 100mm (4") high, spaced a maximum of 3.65m (12') apart. Any scuppers or overflows shall be installed and flashed prior to applying Pli-Dek materials.
  6. All deck drains must be flanged, and properly installed to a proper depth. NOTE: Brass drains with a sheet metal flange are recommended. Pli-Dek requires a galvanized or stainless steel drain as per Drain Detail, PD-24-IW, on all plywood installations. Please contact Pli-Dek for help in acquiring these drains. Do not use plastic, cast iron, or shower drains. If copper drains are used, please contact Pli-Dek for instructions on dissimilar metals. The use of plastic deck drains will void warranty.
  7. Gravel stops shall have a maximum ground dimension of 3/16".
  8. All flashing must be attached to the substrate with galvanized ring shank nails a minimum 25mm (1") length.
  9. All flashing shall overlap adjacent pieces, a minimum of 100mm (4"), installed not to "buck" water, and be caulked horizontally and vertically with a Polyurethane Sealant per ASTM C 920, such as Sika-1a or 221 or equivalent, at the furthest edge with a 3/4" bead of sealant between any pieces of flashing that adjoin. (Surface caulking is NOT acceptable).
  10. All exposed sheet metal flashing, as well as all vertical flashing and door pans shall be coated with Fiberglass and PD Resin or PD Flash Coat and Flash Coat Seam Tape or self-adhering drywall mesh tape, GU80 Top Coat, and GS88 Pigmented Sealer at the time of applying each product.
  11. If using Fiberglass and PD Resin apply continuous sealant 1" in both directions from the seam (vertical and horizontal) and embed 1 7/8" paperless drywall joint tape with a putty knife to the entire seam to ensure the paperless drywall joint tape is completely embedded in sealant.
  12. Deck/Wall interfaces and all stairs must be flashed.
  13. When copper flashing/drains are used, ensure that all galvanized metal; such as, nails, staples, lath, drains, etc. does not come into contact with copper (do not allow any dissimilar metals to come in contact with each other). The contact of the two dissimilar metals will create rust and corrosion (electrolysis). \*\*Contact Pli-Dek Systems, Inc. for additional details and recommendations.
  14. Contact Pli-Dek Systems, Inc for written approval on flashing details that vary or are not included in Pli-Dek Details.

#### D. Sloping

1. It's the General Contractor's, his representative's, or individual owner's responsibility to assure adequate drainage.
2. All plywood substrates are recommended to be sloped of 1/4" per foot.
3. If auxiliary slope is required, PD Slope Mix - DP may be applied. (See Sloping Application Instructions SM-120 for complete details and limitations). When this type of sloping will not accommodate the problem, then drains become a necessity.
4. Pli-Dek requires a galvanized or stainless steel drain as per Drain Detail, PD-24-IW, on all plywood installations. Please contact Pli-Dek for help in acquiring these drains. Do not use plastic, cast iron, or shower drains. If copper drains are used, please contact Pli-Dek for instructions on dissimilar metals.
5. The alternatives available for proper drainage are the responsibility of the General Contractor. Contact Pli-Dek Systems, Inc. for complete details.
6. Additional sloping required on a project should be confirmed through a written proposal given by the trained applicator prior to the commencement of work.

## II. Mixing Instructions

### A. Base Coat

1. Pour 3.8L (1 gallon) of GU80-1 Liquid Admixture into a clean 19L (5 gallon) plastic container.
2. Add one 21kg (46lb.) bag of GU80-1 Base Coat (gray), and mix thoroughly for 3 to 4 minutes. Use a Wind-lock B-M1 mixing blade, or equivalent, powered by a 13mm (1/2") variable speed drill, capable of producing 1000 RPMs. TIP: In areas subject to extremely dry and/or hot climates, it may be necessary to add water (up to .47L [1 pint] per mix). To avoid flash drying, it may be necessary to chill the GU80-1 Liquid Admixture before mixing. A proper safety ventilation mask should be worn when working with all Pli-Dek products

### B. Screed Coat & Knockdown Texture

1. Pour 4.75L (1.25 gallons) of GU80-1 Liquid Admixture into a clean 19L (5 gallon) plastic container.
2. Add one 21kg (46lbs.) bag of GU80-1 Top Coat powder. Mix thoroughly for 3 to 4 minutes, with a Wind-lock B-M1 mixing blade, or equivalent, powered by a 13mm (1/2 inch) variable speed drill, capable of producing 1000 RPMs. TIP: In areas subject to extremely dry, and/or hot climates, it may be necessary to add water (up to .47L [1 pint] per mix). In order to avoid flash drying it may be necessary to chill the GU80-1 Liquid Admixture before mixing. Proper ventilation masks should be worn at all times when working with all Pli-Dek Products. Pli-Dek products must be stored in the shade to prevent overheating and reduction of pot life.
3. If colored cement is required, a Pli-Dek recommended tint pack may be added to the mix

or to the GU80-1 Liquid Admixture prior to mixing with GU80-1 Top Coat. Box all pails of all tinted GU80-1 Liquid Admixture to ensure color consistency to achieve the desired color. Note: ensure that all of the colorant is dispersed out of the container.

*All mixes must be consistent (use the same mix ratios) to maintain color consistency.*

### C. Custom Top Coat

1. Pour 4.75L (1.25 gallons) of GU80-1 Liquid Admixture into a clean 19L (5 gallon) plastic container.
2. Add one 21kg (46lbs.) bag of GU80-1 Custom Top Coat powder. Mix thoroughly for 3 to 4 minutes, with a Wind-lock B-M1 mixing blade, or equivalent, powered by a 13mm (1/2") variable speed drill, capable of producing 1000 RPMs. TIP: In areas subject to extremely dry, and/or hot climates, it may be necessary to add water (up to .47L [1 pint] per mix. In order to avoid flash drying it may be necessary to chill the GU80-1 Liquid Admixture, before mixing. Proper ventilation masks should be worn at all time when working with all Pli-Dek Products. Pli-Dek products must be stored in the shade to prevent overheating and reduction of pot life.
3. If colored cement is required, a Pli-Dek recommended tint pack may be added to the mix or to the GU80-1 Liquid Admixture prior to mixing with GU80-1 Custom Top Coat. Box all pails of all tinted GU80-1 Liquid Admixture to ensure color consistency to achieve the desired color. Note: ensure that all of the colorant is dispersed out of the container.

*All mixes must be consistent (use the same mix ratios) to maintain color consistency.*

## III. BASE & SCREED COAT

### A. General

1. Ensure that the exterior plywood surface has been prepared in accordance with Section I.
2. Ensure that all proper flashing is in place.
3. Air temperature for application of the Base Coat must be between 10°C (50°F) and 43°C (110°F) and must remain so for a minimum of 2 - 6 hours. Ensure humidity levels are low. Do not apply over moisture.

### B. Plywood Deck Preparation

1. Lay out 2.5lbs sq yard G90 Hot Dipped Galvanized Metal Lath in a staggered pattern over the entire plywood surface overlapping the metal flashing, to the edge of the deck surface.
2. Overlap all edges of metal lath, a minimum of 13mm (3/4").
3. Offset metal lath edges a minimum of 150mm (6") from plywood seams. (See DECK PLAN in the Pli-Dek Detail Appendix.)
4. Secure metal lath to plywood with a minimum 22mm (7/8") crown by a minimum 16mm (5/8") long corrosion resistant staples spaced approximately 1½" on center around the perimeter and on overlapped lath seams, and

75mm (3") in the field (approximately 12 staples per square foot).

5. Additional staples spaced every 1½" on center are required where the metal lath overlaps the seam paper, as installed in Section I.

### C. Base Coat Application

1. Mix the GU80-1 Base Coat as described in Section II – A.
2. Pour the GU80-1 Base Coat over the metal lath and trowel, filling all voids at a rate of 25 - 30 square feet per mix. The metal lath must be completely covered in the Base Coat.
3. Allow the GU80-1 Base Coat to dry for a minimum of 6 hours prior to applying the next application. If the base coat does not cover the lath completely, a screed coat is required.

### D. Pli-Dek – "F" Fiberglass & Resin

1. Air temperature for application of the PD Resin and Fiberglass Coat must be between 10°C (50°F) and 43°C (110°F) and must remain so in the acceptable range until the product has cured.
2. Mix the PD Resin using a mechanical mixer at slow speed for approximately 1 minute.
3. The deck must be free of all surface contaminants, such as dust, dirt, etc., which will impair the adhesion of the PD Resin.
4. Lay out the ¾ oz fiberglass mat over entire deck surface extending to all edges of the deck and up all vertical transitions. Overlap mat seams a minimum of 1/4" to a maximum of 1/2".
5. Apply the PD Resin over fiberglass mat, at a rate of approximately 40 - 50 square feet per gallon with a trowel. Allow to completely dry, usually 6 - 8 hours depending on temperature. PD Resin must completely penetrate through the fiberglass mat.
6. After the PD Resin has cured, remove any loose areas, where fiberglass was not bonded, and reapply PD Resin and Fiberglass as needed before application of Finish Coat.

### E. Screed Coat Application

1. Screed coat may not be necessary in all applications. Contact Pli-Dek Systems, Inc. for application details and recommendations.
2. Prior to the screed coat application, remove any high or rough edges using a hand grinding stone or scraper.
3. The deck must be free of all surface contaminants, such as dust, dirt, etc., which will impair the adhesion of the Pli-Dek GU80-1 Top Coat.
4. Mix the GU80-1 Top Coat as described in Section II – B.
5. Trowel a screed coat over the base coat at a rate of 150 square feet per mix. Allow to dry for a minimum of 2 - 6 hours.

## IV. Finish Options

### A. Preparation:

1. Prior to any finish coat installation, the following must be completed:

- a. Grind any rough areas, being careful not to damage Fiberglass and PD Resin coat. Rough areas will affect the aesthetic appearance of the finished product.
- b. The deck must be free of all surface contaminants, such as dust, dirt, etc. which will impair the adhesion of the Finish Coats.

#### B. Knockdown Texture Finish

1. Air temperature for application of the Knockdown Texture Coat must be between 10°C (50°F) and 43°C (110°F) and must remain so for a minimum of 8 hours.
2. Mix the GU80-1 Top Coat as described in Section II - A.
3. Using a hopper gun, spray the Knockdown Coating over the entire deck surface at a rate of 150 square feet per mix. **CAUTION: AS WITH ANY SPRAY MATERIAL, BE CERTAIN TO PROTECT ALL SURROUNDING AREAS FROM OVER-SPRAY.**
4. When the material begins to dry, knock down the material with a trowel. TIP: In order to eliminate footprints, we suggest wearing metal spiked shoes (golf shoes) during this process.
5. Allow the Knockdown to dry a minimum of 2 - 6 hours, depending on weather.
6. Remove any sharp edges by scraping the surface with a scraper or trowel.
7. Air temperature for application of the GS88-1 Sealer must be between 13°C (55°F) and 43°C (110°F) and must remain so for a minimum of 8 hours. Ensure humidity levels are low. Do not apply over moisture.
8. The deck must be free of all surface contaminants, such as dust, dirt, etc., which will impair adhesion of the GS88-1 Sealer.
9. Mix the GS88-1 Sealer thoroughly with the use of mechanical mixers. All containers should be boxed and mixed to ensure consistent coloring throughout.
10. Apply the GS88-1 Sealer over the dry Knockdown application at a rate of 100 square feet per gallon using a 19mm (¾") paint roller nap, suitable for latex type coatings. Two Coats may be necessary.
11. Allow GS88-1 Sealer coat to dry for a minimum of 6 hours.
12. To make cleaning easier in high traffic areas, a coat of GS13 or PD Clear Sealer may be applied over the dry GS88-1 Pigmented Sealer at a rate of 200 square feet per gallon. Surface will become more slippery. Use of a non-skid agent is recommended.
  - a. Surface will become more slippery. Add 40 grit nonskid sand (approximately 5 oz per gallon) to the GS13 or PD Clear Sealer.
  - b. Continuously mix the sealer through the application process so the no skid sand does not settle to the bottom of the pail.

#### C. Elastomeric Sand Finish

1. Air temperature for application of the Sand Finish must be between 10°C (50°F) and 43°C (110°F)

and must remain so for a minimum of 8 hours. Do not apply over any moisture.

2. Before application, mix PD Resin using a mechanical mixer at slow speeds; mix thoroughly until a homogenous mixture and color is obtained. Use care not to allow the entrapment of air into the mixture.
3. Apply PD Resin over the entire deck surface and flashing using a ¾" nap roller and a brush at a rate of 75 square feet per gallon. Do not allow PD Resin to puddle.
4. Broadcast aggregates of washed, dry, rounded, crystal silica sand, approximately 16 mesh at a rate of 100 lbs. per 100 square feet or until refusal (depending on skid resistance requirements) into the wet/uncured PD Resin.
5. Allow a minimum of 8 hours before removing all excess silica sand.
6. Air temperature for application of the GS88-1 Sealer must be between 13°C (55°F) and 43°C (110°F) and must be allowed to dry for a minimum of 8 hours. Ensure humidity levels
7. The deck must be free of all surface contaminants, such as dust, dirt, etc., which will impair adhesion of the GS88-1 Sealer.
8. Mix the GS88-1 Sealer thoroughly by boxing, stirring, or by using a mechanical mixer. Box and mix all containers to ensure consistent coloring throughout.
9. Apply the GS88-1 Sealer over the dry PD Resin and Sand Coat, using a 19mm (¾") nap paint roller, suitable for latex type coatings (2 coats may be necessary.)
10. To make cleaning easier in high traffic areas, a coat of GS13 or PD Clear Sealer may be applied over the dry GS88-1 Pigmented Sealer at a rate of 200 square feet per gallon. Surface will become more slippery. Use of a non-skid agent is recommended.
  - a. Surface will become more slippery. Add 40 grit nonskid sand (approximately 5 oz per gallon) to the GS13 or PD Clear Sealer.
  - b. Continuously mix the sealer through the application process so the no skid sand does not settle to the bottom of the pail.

#### D. Pli-Dek – "U": Underlayment for Tile or Concrete Finish

*Note: The vertical leg of all flashings should be coated with Fiberglass and PD Resin or PD Flash Coat and Flash Coat Seam Tape or self-adhering drywall mesh tape.*

1. Air temperature for application of the Con-Dek "U" must be between 10°C (50°F) and 43°C (110°F), and must remain so for a minimum of 8 hours. Do not apply over any moisture.
2. The vertical leg of all flashings should be coated with Fiberglass and PD Resin or PD Flash Coat and Flash Coat Seam Tape or self-adhering drywall mesh tape.
3. PD Resin should not be exposed to construction traffic.
4. Mix the Pli-Dek GU80-1 Top Coat as described in II-A.

5. Apply a screed coat of GU80-1 Top Coat over the entire deck at a rate of 150 square feet per mix. Allow to dry for a minimum of 2 - 6 hours. Mix the GU80-1 Top Coat as described in Section II – B.
6. Allow a minimum of 8 hours prior to installing any finished product over the PD Resin and sand surface or screed coat.
7. \*Optional: Broadcast aggregates of washed, dry, rounded crystal silica sand, approximately 16 mesh, at a rate of 100lbs. per 200 square feet.

#### E. Polyacrylic Smooth Finish

1. Air temperature for application of the Polyacrylic smooth finish must be between 10°C (50°F) and 43°C (110°F) and must remain so for a minimum of 8 hours. It may be necessary to grind the rough ridges of the Base Coat to minimize chatter lines.
2. Mix the GU80-1 Top Coat as described in Section II – B.
3. Trowel a screed coat over the entire deck surface at a rate of 150 square feet per mix. Allow it to dry for a minimum of 6 hours.
4. It may be necessary to apply an additional coat of GU80-1 Custom Top Coat to create a smoother finish. Coverage rate should be approximately 200 square feet per mix. \*\*Please note: Surface will not be perfectly smooth and will have some undulations/variations.
5. Air temperature for application of the GS88-1 Sealer must be between 13°C (55°F) and 43°C (110°F) and must remain dry for a minimum of 8 hours. Ensure humidity levels are low. Do not apply over moisture.
6. Prior to color coat application, remove any high or rough edges using a hand grinding stone or scraper.
7. The deck must be free of all surface contaminants, such as dust, dirt, etc., which will impair adhesion of the GS88-1 Sealer.
8. Mix the GS88-1 Sealer thoroughly by mixing with the use of a mechanical mixer. Box mix all containers to ensure consistent coloring throughout.
9. Apply the GS88-1 Sealer using a 19mm (3/4") nap paint roller, suitable for latex type coatings, at a rate of 100 square feet per gallon (2 coats may be necessary).
10. To make cleaning easier in high traffic areas, a coat of GS13 or PD Clear Sealer may be applied over the dry GS88-1 Pigmented Sealer at a rate of 200 square feet per gallon. (Surface will become more slippery. Use of a non-skid agent is recommended.
  - a. Surface will become more slippery. Add 40 grit nonskid sand (approximately 5 oz per gallon) to the GS13 or PD Clear Sealer.
  - b. Continuously mix the sealer through the application process so the no skid sand does not settle to the bottom of the pail.

#### F. Epoxy Stone Finish

\*Contact Pli-Dek Systems, Inc. for written instructions.

#### G. Custom Finish: Simulated Tile, Brick, and Stone

1. Air temperature for application of the Custom Finish must be between 10°C (50°F) and 43°C (110°F) and must remain so for a minimum of 8 hours.
2. If colored cement is required, a Pli-Dek recommended tint pack may be added to the mix or to the GU80-1 Liquid Admixture prior to mixing with GU80-1 Top Coat. Box all pails of all tinted GU80-1 Liquid Admixture to ensure color consistency to achieve the desired color. Note: ensure that all of the colorant is dispersed out of the container.
3. Mix the GU80-1 Custom Top Coat as described in Section II - B.
4. The deck must be free of all surface contaminants, such as dust, dirt, etc. which will impair adhesion of the GU80-1 Custom Top Coat.
5. Trowel a tinted GU80-1 Top Coat over the entire deck surface at a rate of 150 square feet per mix. Allow to dry for a minimum of 2 – 6 hours. (Decorative scroll lines can be achieved at this step prior to screed coat drying, as long as no templates or tape are going to be used.)
6. Install one of the various types of stencil patterns or install tape pattern over cured screed coat to achieve desired pattern finish.
7. Mix the GU80-1 Custom Top Coat as described in Section II – B.
8. Trowel a tinted screed coat over the stenciled or taped deck surface at a rate of 150 square feet per mix. Allow to dry for a minimum of 2 - 6 hours.
9. Apply desired stain/shading using a low pressure sprayer, soft broom, or sponge. Contact Pli-Dek Systems, Inc. for complete details.
10. Remove stencil or tape pattern.
11. The deck must be free of all surface contaminants, such as dust, dirt, etc., which will impair adhesion of the GS13 of PD Clear Sealer.
12. Apply a coat of GS13 of PD Clear Sealer or GS13 Clear Sealer at a rate of 200 square feet per gallon. (2 coats may be necessary).
  - a. Surface will become more slippery. Add 40 grit nonskid sand (approximately 5 oz per gallon) to the GS13 or PD Clear Sealer.
  - b. Continuously mix the sealer through the application process so the no skid sand does not settle to the bottom of the pail.

#### V. Slip and Fall Precautions

OSHA, American Disabilities Act (ADA), and The Federal Housing Act (FHA) have now set enforceable standards for slip-resistance on pedestrian surfaces. Pli-Dek Systems, Inc. recommends the use of angular slip-resistant aggregate in all coatings or flooring systems that may be exposed to wet, oily/greasy, or otherwise potentially slippery conditions. It is the end users responsibility to provide a flooring system that meets current safety standards. Pli-Dek Systems, Inc or its sales agents will not be responsible for injury incurred in a slip and fall accident. Please consult local building codes for the current coefficient of friction requirement.
